

# Task: Leveraging personal projects to demonstrate professional competence

Hopefully you have a good idea what kind of project you are supposed to build, time to build your projects as they will lay foundation for your clients and decide if they wanna hire you

How to choose which project to build

1. Initial idea from what you wanna sell (web app, mobile apps etc)
2. What trend can I incorporate into this idea? (such as LLM / langchain / new fresh what everyone is talking about)
3. Can I build it fast? (you wanna be able to build it fast and deploy fast)

I decided to build

1. An app that does \_\_\_\_\_ which incorporates new trend \_\_\_\_\_ and it will be built within \_\_\_\_\_
2. An app that does \_\_\_\_\_ which incorporates new trend \_\_\_\_\_ and it will be built within \_\_\_\_\_
3. An app that does \_\_\_\_\_ which incorporates new trend \_\_\_\_\_ and it will be built within \_\_\_\_\_
